[International Cooperation][Cloud Computing] NEC Presents Its Cloud Programs, Attempting to Allure Partners in Taiwan ([Chinese Version](#))

China Times E-paper (2010/07/29) NEC, the largest communication-information company as well as computer manufacturer in Japan and the second major Japanese procurement company in Taiwan, held a forum, entitled "NEC Taiwan Solution Fair 2010," in Taiwan to present its latest solutions and programs of cloud computing on July 29, including its DIY checkout counter which made its first overseas debut, and its DIY recharge station for electric vehicles. NEC wished to enhance the cooperation between Japan and Taiwan and enter the China market together.

Executive Yuan's Global Investment Service Center (trans. temp.) will begin to operate on August 8, and its first tender-invitation delegation left for Japan on July 25. NEC, whose procurement per year in Taiwan reached over three billion US dollars, was the major target of the delegation. Meanwhile, NEC Vice President Toshimitsu IWANAMI hosted the forum in person and presented NEC's new solutions and programs in Taiwan. Among the presentations, the DIY checkout counter made its first overseas debut; with the solution, customers can easily checkout with an electrical purse, the sensor at the exit and the oral directions pronounced at the counter.

NEC planned to offer an e-platform and to utilize cloud computing technology to get its own organization integrated with the enterprises in Taiwan. NEC wished to form an alliance with Taiwan partners and enter China market together.
